

Transformation of Collective Mind in the External World

By Matteo Benacchio

We know, when we talk about esoteric astrology, that everything manifested in the world (a house, a car etc., all these things that exist in manifestation) have a function, and this function is represented from his characteristics and qualities, inner and external, so that's why We have to consider morphology, astrology and the seven rays.

JUNG

Carl Gustav Jung was the first to recognize (openly) the connection between physical manifestation and the archetypes present inside our inner self, that's why his works are so pointed towards symbolism and the function of symbols. This is also the origin of three of his bigger theories: projections, dreams analysis and synchronicity.

For Jung synchronicity was something very specific, that was very deeply connected with the unlocking of some energies or archetypes within oneself, and it presents a key to break mental crystallization. But when we talk about synchrony we are talking about an exact and specific thing or a fact inside a space, in a specific time. But we have to understand that we always have a specific event, in a specific time that is the universe, and that allows us to understand that the whole universe is constantly in a state

of synchrony with inner forces, the outer world manifestation is only the materialised form of those forces. Astrology (more specifically esoteric) describes this, but it's not just astrology that can communicate to us about the specific energies that compose this manifestation. If we accept the new paradigm that all we see in the world is a symbol and manifestation of an inner and functional plane ($E=mc^2$ as Einstein already explained, and as quantum physics are always implementing), it comes natural to think that all that we are seeing in the outer world is in synchrony with his inner nature. The glyph of Aquarius (the new era energies) explains that concept very easily, in its shape.

Douglas Baker and Esoteric Astrology

Douglas Baker understood these principles very well, and he had united the symbology of esoteric astrology (and the inner characteristics) with all the things

that exist in reality. He translated all the archetypes into a language that could be understood by anyone whom so desires. When we are born (in reality when everything born) we take a place and position inside a bigger mechanism, (that's why we call it in-carnation, in Italian language flesh is said carne in- carnation I think then in the English language this could be explained with em-bodiment, if that makes sense!), this mechanism is the universe itself.

The implication is:

- I am part of a big mechanism
- I am a component of it
- What kind of component am I?
- what is the function of this component inside the mechanism?

Astrology is the key that could answer the questions representing the solar system mechanism that corresponds to our incarnation inside this system or mechanism.

Physics and Quantum Physics

Physics and Quantum Physics show us how an atom is not stable or fixed, the atom becomes stable or fixed only when it becomes part of a physical manifestation. If we take an atom free from a form – a physical form, it is not defined (Heisenberg's principle of indeterminacy), because the electron's position is not sure, in reality it is probability. With quantum physics we understand that it is the observer that makes the probability collapse in a form (superposition). When we talk about an observer, we are talking about a conscious being, so it is the conscious being that defines a state of energy (atoms) in a form.

Conscious and Unconscious and Collective mind

Jung's main discovery didn't stop with what we spoke about previously. Jung also developed Freud's idea of the Unconscious and gave to that a major role in our mind, and also in our Evolution – both as a single human being and collectively. Jung introduced the concept of collective unconscious, he maintained that for all of humanity in the world, there were patterns that were the same, and he named these patterns archetypes. Archetypes are something that precedes us, and that are bigger than us and they represent our inner function, our inner mind. Douglas Baker elucidated the idea that astrology was the language of these archetypes, and he undertook to describe astrologically the archetypes of all the things that exist. Douglas Baker's greatest contribution to astrology was his 'Dictionary of Astrology' in which he gives a translation for every

combination of planet, sign and house. The translation of these aspects is the translation of the archetypes of the inner world, or if you prefer, the functions of the things or manifestation.

Mind is not totally developed

Now we know that there are different degrees of consciousness, for example: a kid is not conscious of many things like an adult is, that's why usually when we mature, we become less reckless than when we were young, we become conscious of things. At the same time in mankind there are people more consciously aware than others, so our consciousness has many degrees. What for some is conscious awareness, is for others unconscious, this is quite logical reasoning.

For esoteric astrology and ancient culture, the mind is a vehicle for the consciousness or the true and immortal being in us – the Soul. The mind (actually) as a vehicle is not completely developed, and that's why for the moment exists what we call the unconscious. The unconscious is not only the place where we put our trauma and problems, that we don't want to see, but is also the place of our potential, because all that is unconscious (not known) needs to be discovered, and if we talk about symbolism ([Gary Kidgell has explained this very clearly in his article Archetypes the Claregate Method](#)) Hades (aka Pluto) is the keeper of the riches, that symbolically are our potential.

One of our potentials is our mind and the mind is currently having a big expansion with Western culture playing a large role in this. We can observe that in only a few centuries, education and schools are becoming a human right for all people in the world. Nearly all of the population has access to education bringing about an evolution of the mind substance (the substance of the mind needs to be evolved and has seven planes). One of the objectives for the evolution of the mind is reaching plane by plane, the higher planes of the mind that are directly connected with the planes of the Soul, or abstract mind. So, we could say that now we are growing up in our collective mind, some are more conscious, and some are less, but we can see or search the results of these processes in our external manifestation. Cars, changing of, and symbolism. So, if we accept all what we have said until this point, we could understand that a change in the outer world

corresponds to an inner change, and if we talk of big change, where many of world 's populations are involved, we are talking about our collective mankind inner transformations. Now we are living through one of the biggest changes after the industrial revolution, we are assisting something like the second industrial revolution. The United Nations wants to change by 2030 all our carbon emissions. The change will be gradual, and from the carbon and fiery combustion, we will pass to electricity. Now the passage from the fire (burn something) to electricity is a very big change.

In [Baker's Dictionary of Astrology](#), we find electricity is ruled by Sagittarius and Aquarius. We have to keep in mind that Aquarius has as orthodox ruler Uranus. We have Abstract mind and Higher studies and so also the Higher planes of the minds with Sagittarius. We have the 5th Ray of Concrete Knowledge and the mind's waves and sharing of information and for sure electricity flowing and steps with Aquarius. Uranus as ruler in this case contributed to the manifestation of the physics world (as the orthodox ruler) in this line of energy and also of to the new line of the new era (Aquarius). That's why all the technology is emerging in this first manifestation of Aquarius energies, in fact we have strong components of 5th and 7th rays. Uranus is also connected with orthodox astrology to the discovery of electricity, and it is directly connected with it, and I think that could be linked with spiritual electric fire. Now one of the bigger changes that we are assisting in is the passage of the car from gasoline to electric motors and communications systems. We know that cars and communications system are under the ruling of Uranus and Libra symbols. The motor car is a good symbol of the personality. The personality is the vehicle that our Soul uses to manifest its qualities in the outer world, and communications systems represent the dialogue between the higher Self or soul with personality.

This immense worldwide modification and change of our vehicles and communications systems, causes us to think that the vehicle of our personality, our collective personality is changing. Further to this the way to communicate between our higher Self and personality is changing. What could be the change? To understand the answer to this question, we have to consider the characteristics that this kind of automobile brings with them. First of all they are quiet silent. Silence is a very high quality for spiritual discipline and is linked with calmness. We know that noise, normally, corresponds to high moving and high frequency; high frequency includes a lot of movement. When we talk about meditation, spiritual discipline and our

non-material bodies, we know that only if we have quiet and calm bodies, we can

reflect our higher counterpart. Symbolically as in the water, if in water there are ripples, we cannot see our face on it. With silence we have less waves and we can see our face on the surface of water. In fact, silence is one of the main qualities required for meditation and one of the more important methods to contact the Soul or higher Self.

So, if we take this car's transformation in correspondence with our inner world, this could mean that the human personality is on the way to becoming more silent and calmer, or it is at least trying to do this. We have to remember that silence and the human ear are in astrology ruled by the sign of Libra. The second point that we could see in electric car's characteristics, is they are less polluting in the atmosphere. The smog could be viewed like the bad production of our vehicle, so we have the garbage of our three personality bodies. Probably smog is reflected more as a symbol of our mental or astral level, that implies also that humankind is working well to clean up their own astral and mental collective body (in that specific matter).

These two points, silence-frequency and purity-cleansing are very nearly connected. One cannot be one without the other – they go together. Third characteristic is the atomization of the automobile, this is a Uranus characteristic, and I think 7th ray. Automation will bring, in the future (there is already experiment ongoing in a USA city), to self-driving car, giving freedom to drivers to do other things, and the implication here could be good or bad, We have to see and check both points of view. We have two possibilities of interpretation:

1. the good one is the freedom of the Soul (driver) to do what it prefers, without being constricted to lose all his energy in the control of the personality.
2. the opposite, the Soul cannot get control of the personality and have a disconnection.

I think that there will be some kind of remote control in case of problems, and this could symbolize the Soul's control when the integrated personality presents the problem of destabilization (driver could come back on a

manual control). We know that initiation brings an automatic control of the personality by the Soul because they are integrated, so the higher Self could manifest its own qualities without effort. This symbol could be a great indicator for the future. As always, we have to ask ourselves and understand the implications of technology in our life. For sure a self-driven car permits the driver to not lose time controlling and giving directions to his vehicle, and this time will be better utilised being more subjective and creative. But ultimately the most important symbolism is that the personality will be able to support electric energy. In cosmogenesis we have three fires that make the world's energy exist. We have Fire by Friction, Solar Fire, and Electric Fire (the most spiritual). As cars develop the ability to function with electricity, maybe our humankind personality is becoming more able to use and receive the electric spiritual fire.

It is likely that this will be only a body transformation as if humankind is preparing its own self to become able to receive this kind of energy. Those who understand esoteric matters, also know that the Chakras are the source of our energy on a higher level than the physical one. In this sense, the transformation of our car's engine could be seen as the human collective journey from, the material nourishment – the fire produced from the cells, foods and the stomach, that gives us the physical body's energy, to the metaphysical level, where the nourishment and energy comes from the chakras. Electric motors are more connected with our electric bodies, and in analogy with the human body, our electric field is the nervous system, the physical counterpart of our astral body. So, we are starting to work in a different way with the flow in astral and mental levels.

Douglas Baker talks about nuclear energy between solar fire in essence and electric spiritual fire. The curious thing is that this process in the nuclear power plant gives us electric energy. In fact, we now use this energy to produce electricity, and this is Yoga on a planetary level as stated by Douglas Baker. Electric energy for us is power, and the power that we use for lights which is a symbol of individualization and consciousness. In some way, we are living the next step on the line of spiritualization of our human bodies, as we passed from the fire used for lighting our homes (symbol of the Soul in this case) to electric light now (increase of consciousness, from friction fire to solar fire), and now we are bringing this

also to our personality. We have flow of electric current when we have two poles, one is solar fire and the other is electric fire.

When our body is able to connect these two poles, we should experiment with what is called electric fire. Now is not time for that but it is very probable that with the vehicle symbol we are improving our bodies to receive this kind of energy. Other things to keep in mind is that the battery is made with a mineral, and this process is bringing electricity through the mineral, and this brings an evolution on the mineral itself.

Communication System

It is also a case that our communication system is evolving very fast and becoming more global, cutting the problem of distance (Earth & Sagittarius). This communication system is based on technology like computers, smart phones (Uranus), internet (Aquarius), and for sure radio waves (Aquarius). Communication could be external or internal. Now much of our human attention is going on external, and the fastest way of communication by waves could be the anticipation of the future potential of the mind to communicate with telepathy – waves of the brain! On the other side we have internal communication, this could be our communication with

the higher Self, and makes us need the calm and the stability of the lower bodies in our personality and this returns us to our vehicle and the silence of it. Symbol's transformation

This is an example about how we can research, in our collective transformations of the outer world, and try to understand where we are going and what we are doing as collective on an inner level.

Alice Bailey: Treatise on Cosmic Fire – Lucis Trust

Page 319 – So all that can be seen in manifestation is basically physical electricity. (we are on the cosmic physical plane).

321 – The electrical interaction between two units causes what we call light, and therefore objectivity.

321 – When this polarity is resolved in man, the three different types of electricity manifest themselves, and the light burns, irradiating the random body and lighting the entire Sutratma, or thread that connects the causal vehicle with the physical brain.

322 – The activity ... electrical manifestation of matter.

323 – He electrifies and vivifies all three bodies or aspects by unifying them into one.

326 – The influence of the Buddhic plane, and the electrical force which is its peculiar characteristic, they begin to be felt, and his energy also begins to have a definite effect on the egoic bodies of men; the fourth ether of the systemic physical plane also assumes his own right place in the minds of men, and the electrical force of that subplane is already beginning to be adopted and used by man in the mechanical arts, in the transport system, in the

great diffusion of illumination and healing. These four uses of electricity. Mechanical uses, transportation, lighting, healing. They are nothing more than the application on the physical plane of the parallel use of force electric Buddhic.
